Count on our contribution

superior product freezing or chilling

tunnel
freezer

Our Linear Tunnel Freezer is ideal for cooling, chilling, or freezing of hot baked IQF food. The cryogenic tunnel system can process a wide variety of food – from small items such as burger patties to large items such as bread loafs or large out meat.

The Linear Tunnel Freezer has a field-expandable modular design and offers the widest configuration of cryogen spray and circulation fan arrangement to achieve superior freezing or chilling without thermal shock, yield loss, or dehydration. The rugged, in- and outside welded, stainless steel construction ensures trouble-free operation and the outstanding service life of the equipment.

fast and **efficient** freezing, cooling or chilling

- Unique Top-lifting design
- Space saving
- High product yield
- Low capital investment
- Quick installation time
- Variable belt speed for all belts
- Compact design
- Easy adapted for line expansion
