fully **automatic** for increased productivity

horizontal
automatic
freezer

The horizontal plate freezers in the HS Automatic series are flexible and fully automatic. They are especially ideal for the in-line process freezing of packed products in cartons or trays.

The HS Automatic freezers feature a heavy-duty, hot-dip galvanized steel frame or a frame in stainless steel and hydraulic twin rams that ensure a stable and even plate pressure for homogeneous freezing. Single station opening for easy loading and unloading.

Double contact freezing for fast freezing and preservation of quality food at the lowest possible cost.
